Cosmetic Dentistry

Improve Your Smile With Cosmetic Veneers

It's no accident that cosmetic veneers look so natural that they reflect light like natural tooth enamel while masking flaws and rejuvenating smiles.

In the last few years, porcelain veneers – some as thin as contact lenses – have become the technique of choice for treating discolored, chipped, or stained front teeth. In some cases, veneers can even replace traditional braces. *Lumineers™* by *Cerinate®* Porcelain are unique because for most patients, there is no discomfort, no needle, no drilling ...and no loss of tooth enamel.

As if that weren't enough, in most cases, your new smile can be created in only one or two dental visits. These revolutionary cosmetic veneers have been clinically proven to last for 18-20 years.

Why is this so important? A beautiful smile has become the new social barometer for many people today. A smile is the first thing people notice when they meet you – before they notice your eyes!

The benefits of cosmetic veneers ...

- Long-lasting.
- Whitening adds youthfulness.
- Dramatically recontour your smile.
- Translucence and natural color create depth and high realism.
- Applying veneers doesn't involve moving your teeth.
- Won't stain/wear like natural teeth.
- Resists disease-causing bacteria.

Please call our office for a complimentary consultation to see if you are a candidate!

Tooth-Colored Restorations

Veneers

Gum Sculpting & Veneers

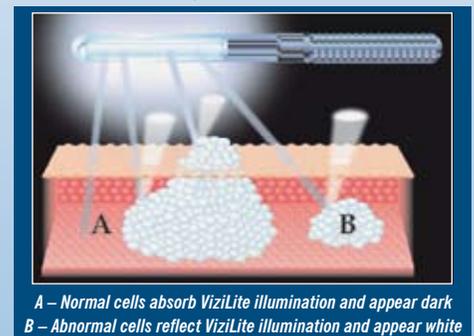

Oral Cancer Screening

Now we have new wellness exam technology that dramatically improves our ability to screen for oral abnormalities that could lead to cancer. Because early detection is essential to increase chances for successful treatment, we always check your whole mouth (tongue, lips, cheek lining, and gums).

We have acquired Vizilite™, (a disposable light) a state-of-the-art, painless, non-invasive screening tool that helps us to see what we can't see with the unaided eye during your routine oral cancer checkup. Our gum

specialist can further more perform a brush biopsy here in our office.

ViziLite™ enhances our ability to identify abnormalities.

**A – Normal cells absorb ViziLite illumination and appear dark
B – Abnormal cells reflect ViziLite illumination and appear white**

Dental Implants

Dental implants are more than replacing teeth... They can help you look great!

Teeth that are lost to gum disease, cavities, or trauma from an accident can be permanently replaced by dental implants – artificial teeth permanently anchored in the jawbone. This is important. Bone loss will always follow the loss of a tooth. And if bone is lost even from only one tooth, the surrounding teeth will shift. This can affect your appearance, speech, ability to enjoy food, and your self-esteem.

- Placing dental implants soon after tooth loss can save bone, teeth, and the look of your smile.
- Implants really do look and feel just like natural teeth.
- Implants help to keep gums looking healthy and young.
- Implants have been available for more than thirty years.
- Implants can be used to anchor dentures to prevent soreness and clicking, or as replacements for dentures and bridgework.

Let us help you decide whether dental implants are for you. Like any other cosmetic restoration, we'll take into account your health, where the implant is needed, the best implant design, and its suitability for your lifestyle.

We Do Invisalign® Now!

- Straighten your teeth with clear braces (Invisalign®)
- Revolutionary technology in cosmetic dentistry

Helping You To Relax - You Do Not Have To Be Afraid Anymore!

We are pleased to announce that our office is state certified to make oral sedation available to our patients. Imagine not being afraid to go to the dentist and being able to accomplish all your dental care in as little as one appointment. You'll be able to smile with confidence and chew your food without pain. If you've been putting off years of dental work, Sedation Dentistry can

change your life.

The only thing standing between you and getting the dental care you want is a couple of tablets of medication. It couldn't be simpler. No dental work is done until you are completely relaxed and the medication has started to calm you. That is why we do a complimentary consultation with absolutely no dental treatment at

your first visit, just to review your concerns, questions, and medical history. Then, we will schedule an appointment to do the exam, x-rays and treatment plan prior to your dental visit. This way you can plan how you want to reach your goal, without the anxiety of getting the treatment done in the same day. Most patients feel that they have slept through their appointment.

COMPLIMENTARY CONSULTATIONS AVAILABLE

Advance Dental Care Team

Dear Dr. Maz,

I am writing to thank you for giving me the best dental experience I've had to date. As you were so keenly aware, I was one of those patients absolutely terrified of visiting the dentist. I did not even want to have someone looking in my mouth much less touching anything in there! Because of that fear I neglected to take care of my mouth and needed extensive work done to correct that neglect.

From my first visit both you and Dr. G. went out of your way to make me feel as comfortable as possible. When you spoke to me about the work that needed to be done and offered the

suggestion of sedation, I was thrilled the option was open to me.

The night before my appointment you called to calm my fears and make sure I took the first part of my medication. It made me feel like I was in the most capable hands. The office was quiet and I was asked to pick a movie to view and given the sedation medication. The movie wasn't on more than 15 minutes before I went to sleep. I felt nothing during the procedure and was able to go home and sleep the rest of the medication off. The day after my appointment, I felt fine-no medication

hangover, no pain and no swelling. I have to tell you I was thoroughly amazed and delighted.

Thank you so much for the care, attentiveness, professional work and follow up you gave me. I would (and have!) recommended your office to anyone who has a fear of the dentist or just needs a referral to a new dentist that seems to care about the patient and not just the fee.

You're fabulous-keep up the good work!!

Donna D. 9/29/07

We Welcome New Smiles!

At Advance Dental Care, we take pride in bringing added value to every patient by meeting all of your dental needs here in one location and by offering a comprehensive range of dental products, technology, and procedures.
